Our 17 year history assures best practice in privacy, security and the ethical use of data

We all have a responsibility to use data for good

Privacy

- We have built our business based on privacy by design principles for the past 17 years
- Quantum has strict protocols around the receipt and storage of personal information
- All information is de-identified using an irreversible tokenisation process with no ability to re-identify individuals.

Security

- We are ISO27001 certified - internationally recognised for our ability to uphold best practice standards across information security
- We use 'bank grade' security to store and process our data
- Comply with 200+ security requirements from NAB, Woolworths and other data partners
- All partner data is held in separate restricted environments
- All access to partner data is limited to essential staff only
- Security environment and processes regularly audited by our data partners.

Ethical use of data

Applies to all facets of our work, from the initiatives we take on, the information we use and how our solutions impact individuals, organisations and society.

Quantum believes in using data for progress, with great care and responsibility. As such please respect the confidence nature of this document.

Executive summary

01

Chips Category Review

- Older Families – Budget generated the highest total sales (\$168,363.25) and purchased the highest average units (≈ 9.6 – 9.8 units per customer).
- Young Singles/Couples – Mainstream had the largest customer base (8,088) but lower average spend and units per customer.
- New Families (all tiers) recorded the lowest sales, units, and average spend, indicating low engagement.
- The 175g pack size dominated sales across all segments, followed by 150g and 134g packs.
- Kettle, Smiths, and Doritos were the leading brands across both high- and low-performing segments.

02

Store Analysis

Store 88: Trial was successful with a statistically significant increase in sales, driven by more customers and higher transaction frequency.

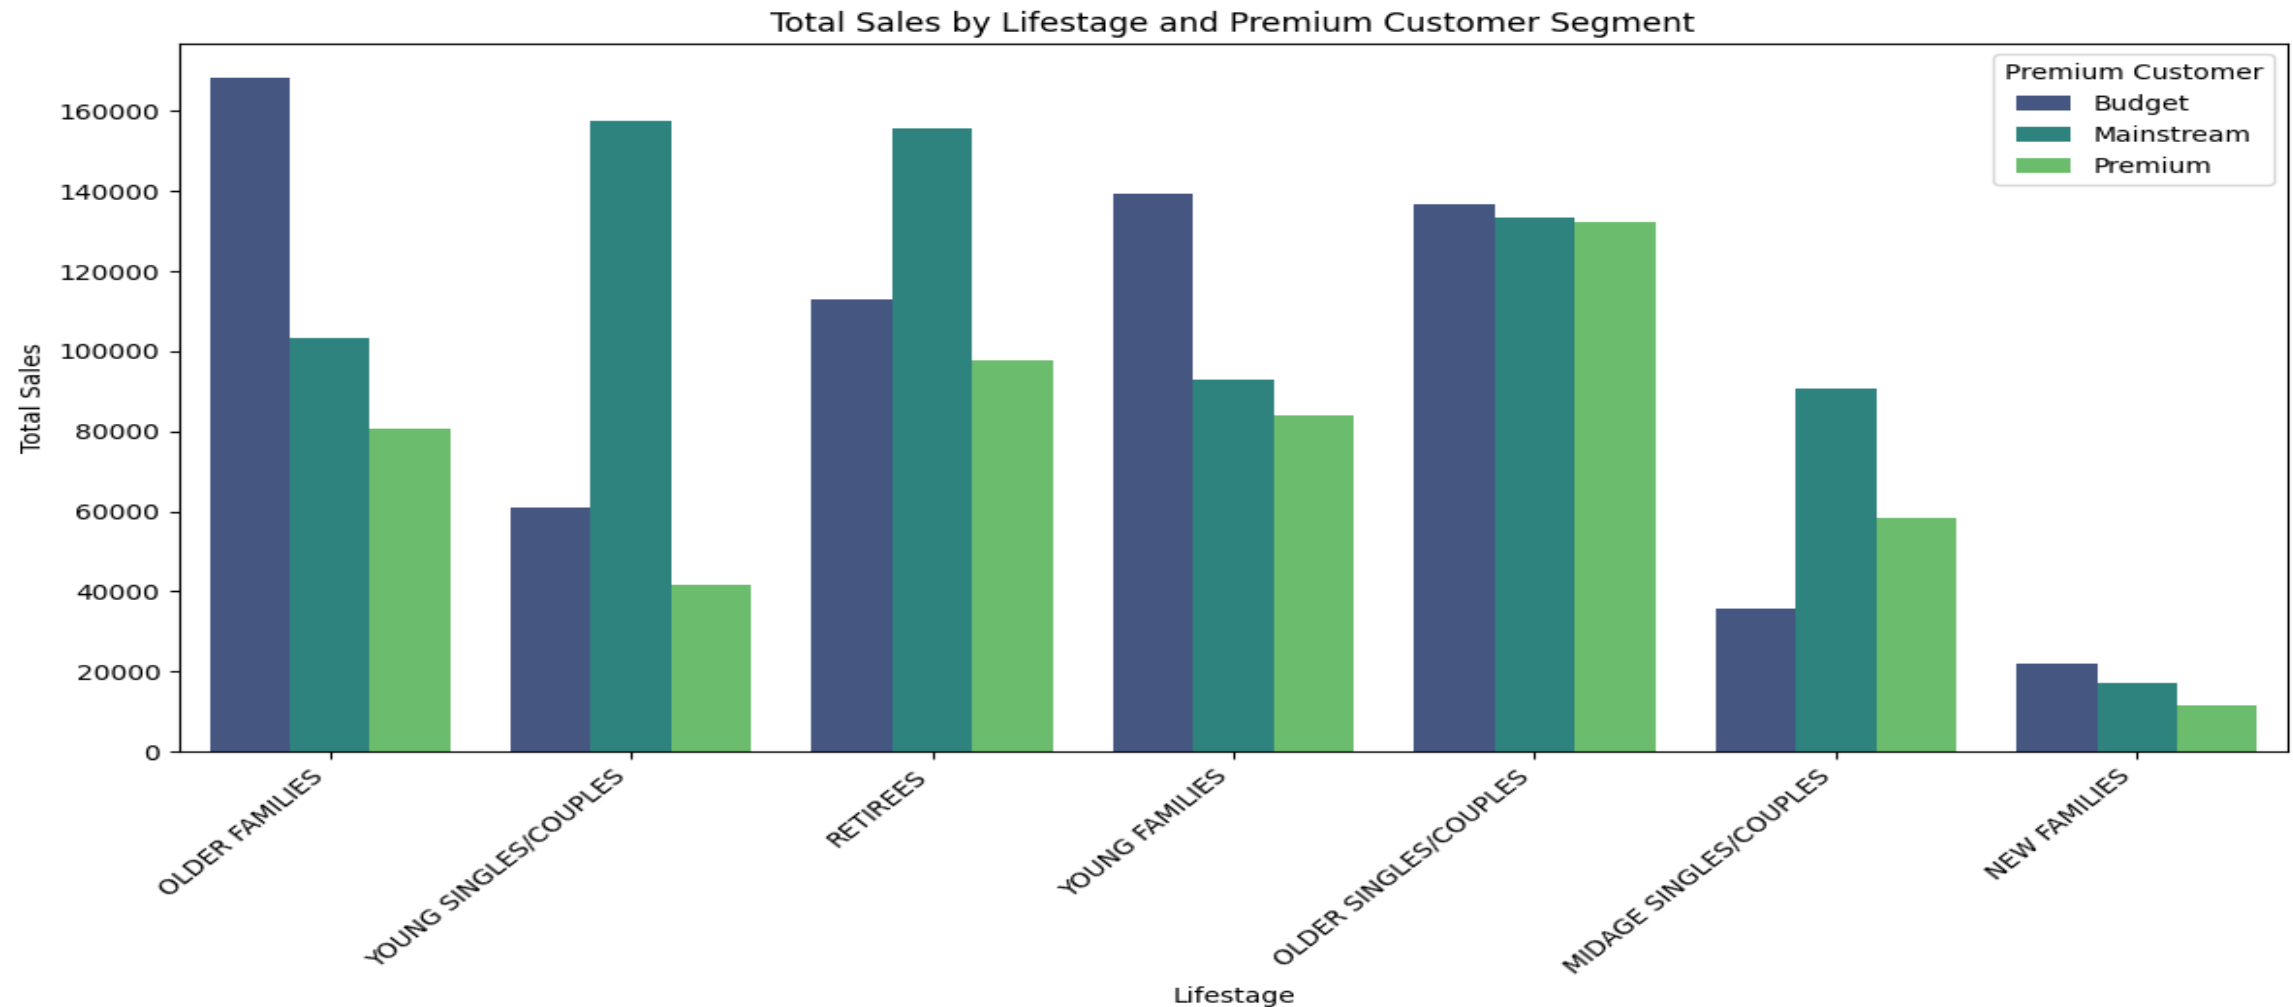

Store 77 & 86: No statistically significant improvement from the trial.

Store 86 Concern: Decline in transactions per customer needs further investigation.

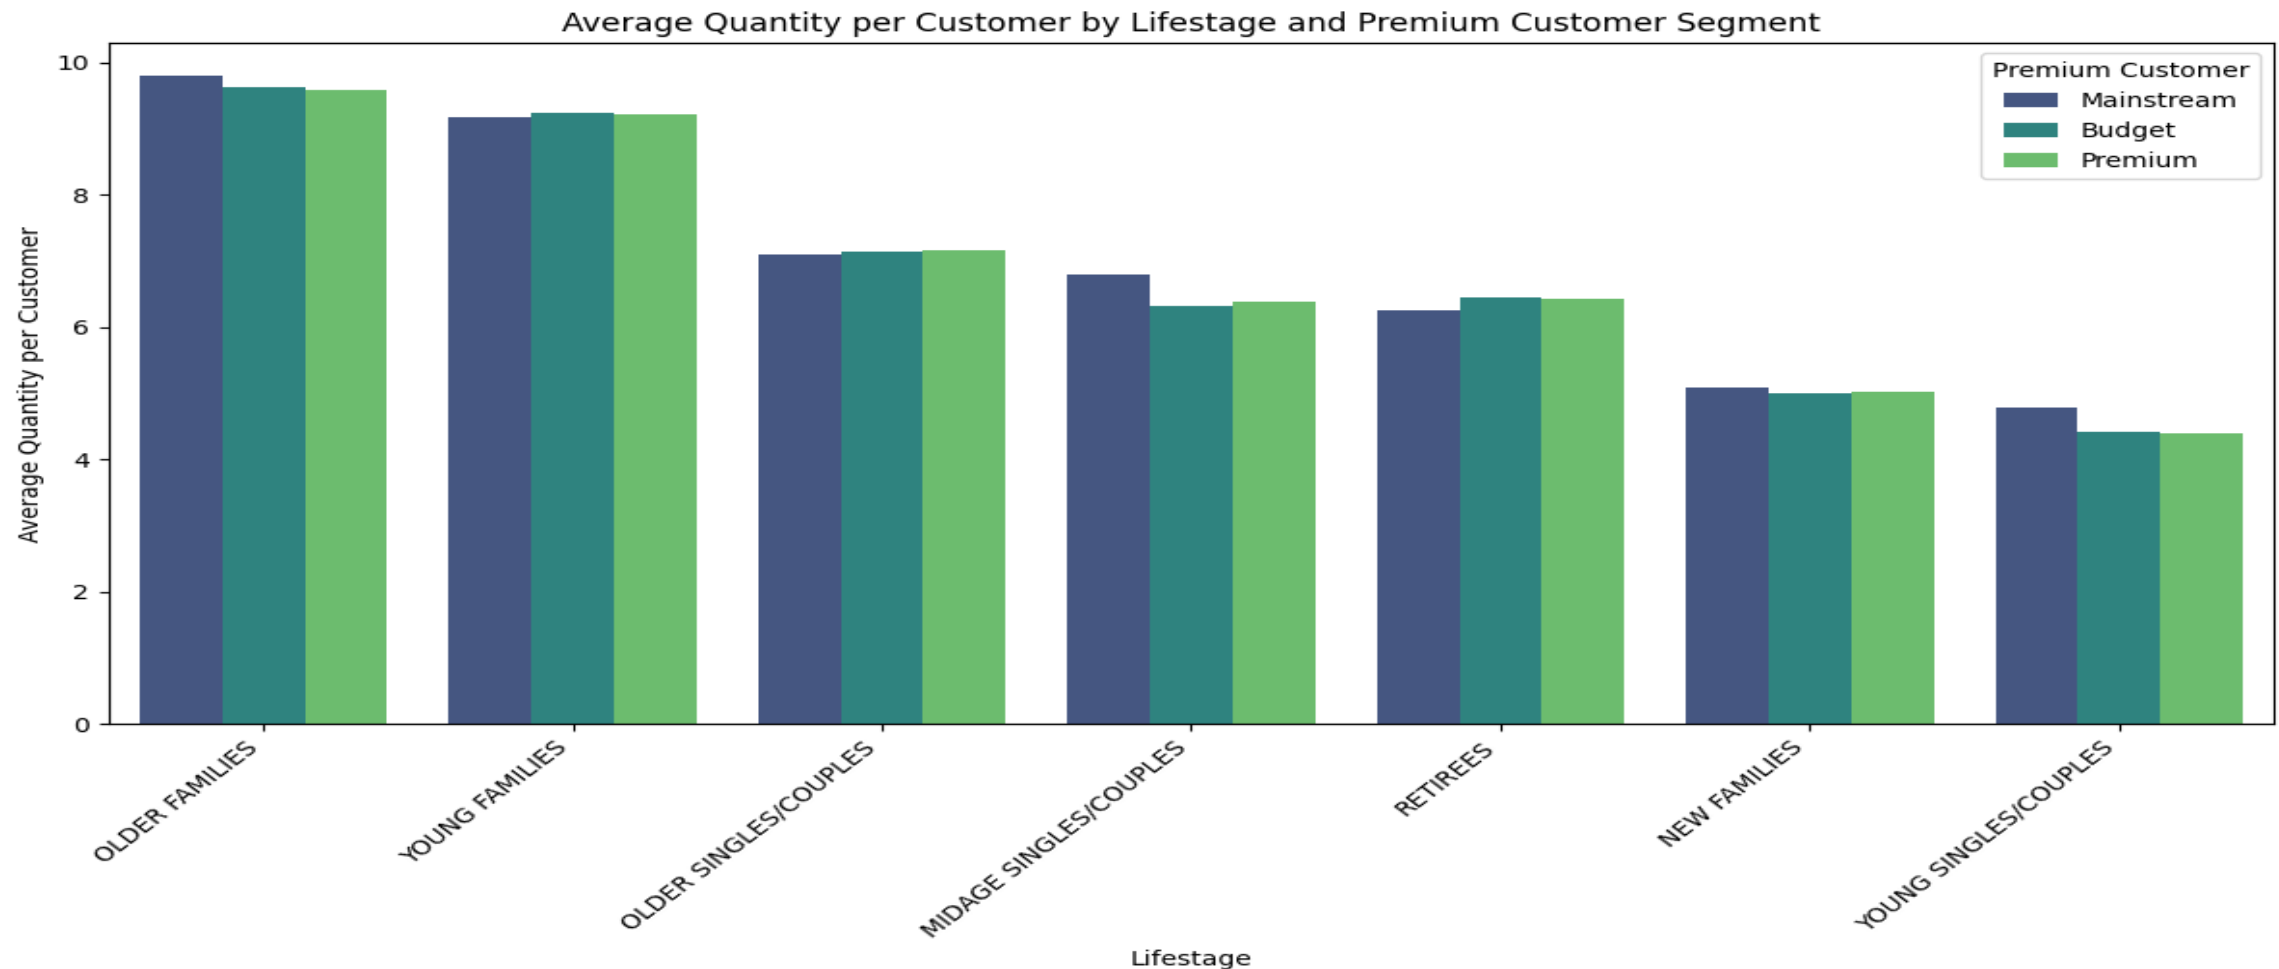

01

Category

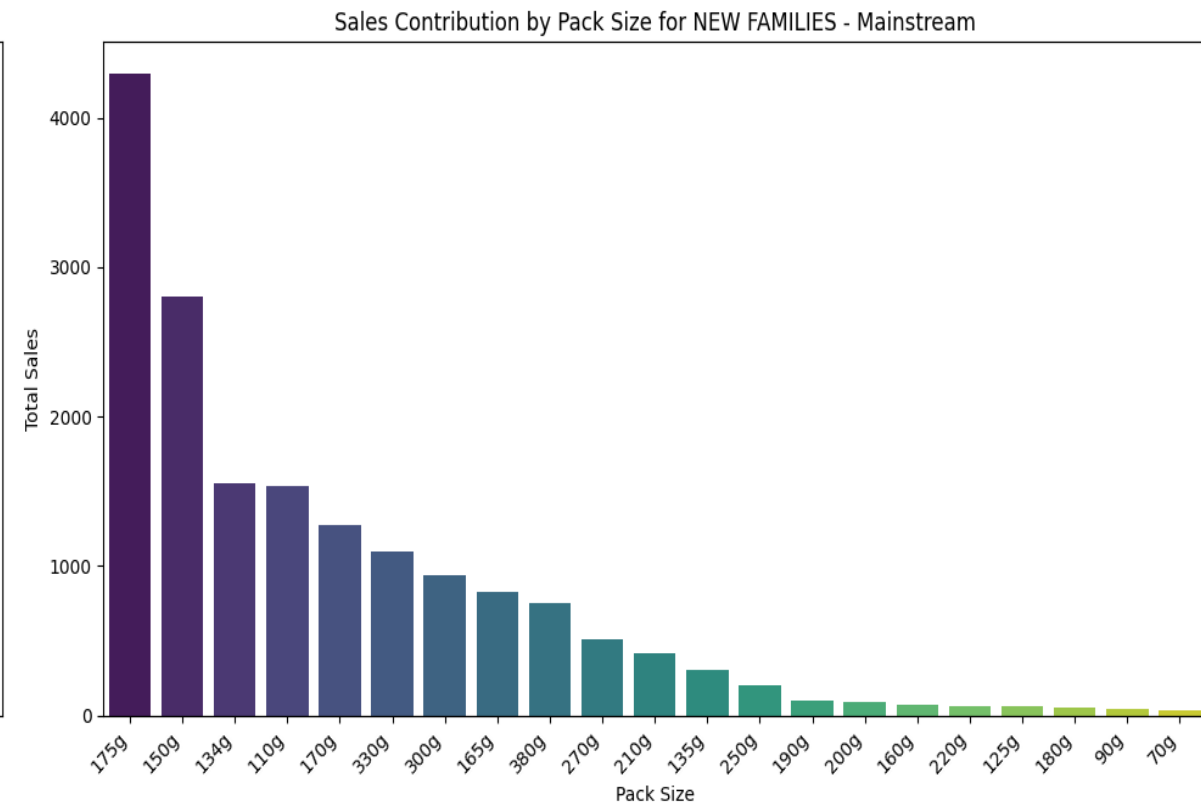

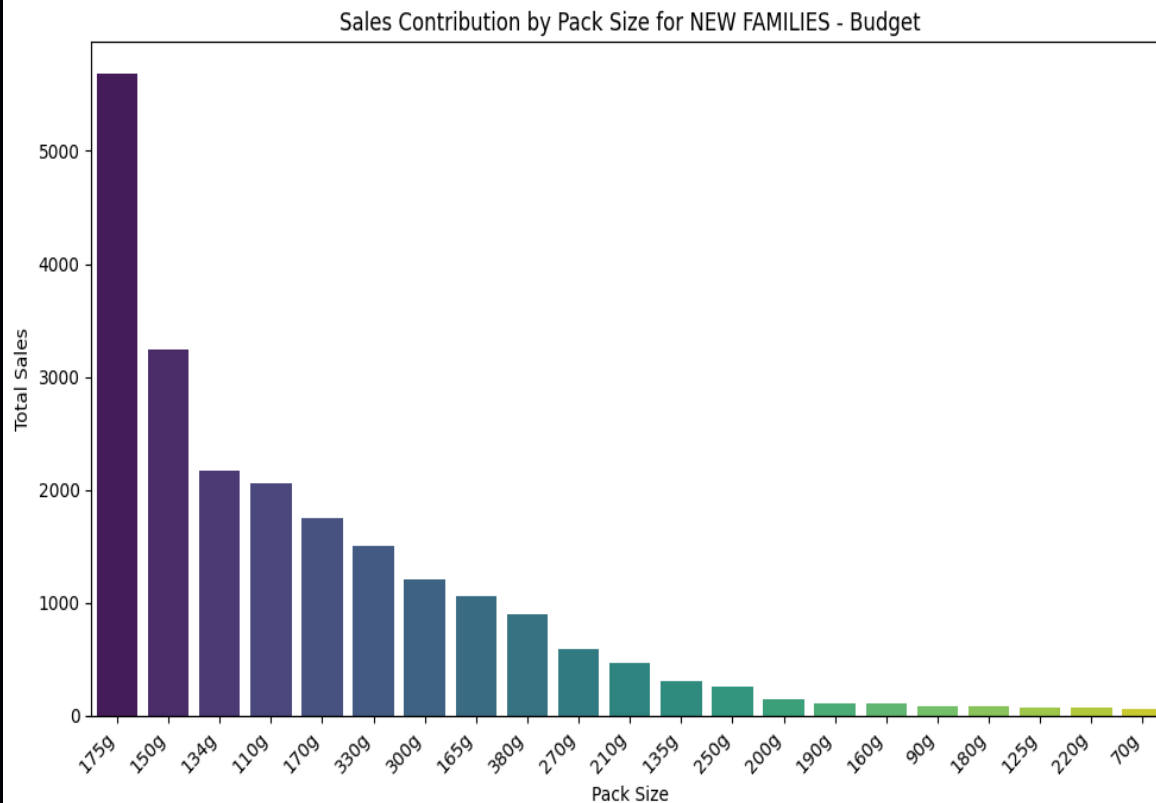

- Our analysis shows that, as displayed in the figure below, total sales are driven predominantly by two Mainstream segments: Young Singles/Couples and Retirees.
- These groups represent the largest portion of our customer base, combining high density with frequent purchasing patterns. Our findings indicate that these Mainstream segments are the primary growth engine, and by prioritizing them, we can maximize both volume and market reach for our brand.

- As illustrated in the figure, the average price per unit is notably higher among Mainstream Young and Midage segments—approximately \$4.07—compared to Budget or Premium segments, which average \$3.65 to \$3.70. This indicates a clear willingness to pay premium prices within the Mainstream group.
- Our findings suggest that we can leverage this trend by focusing on premium offerings, allowing us to raise margins and drive growth in these segments.

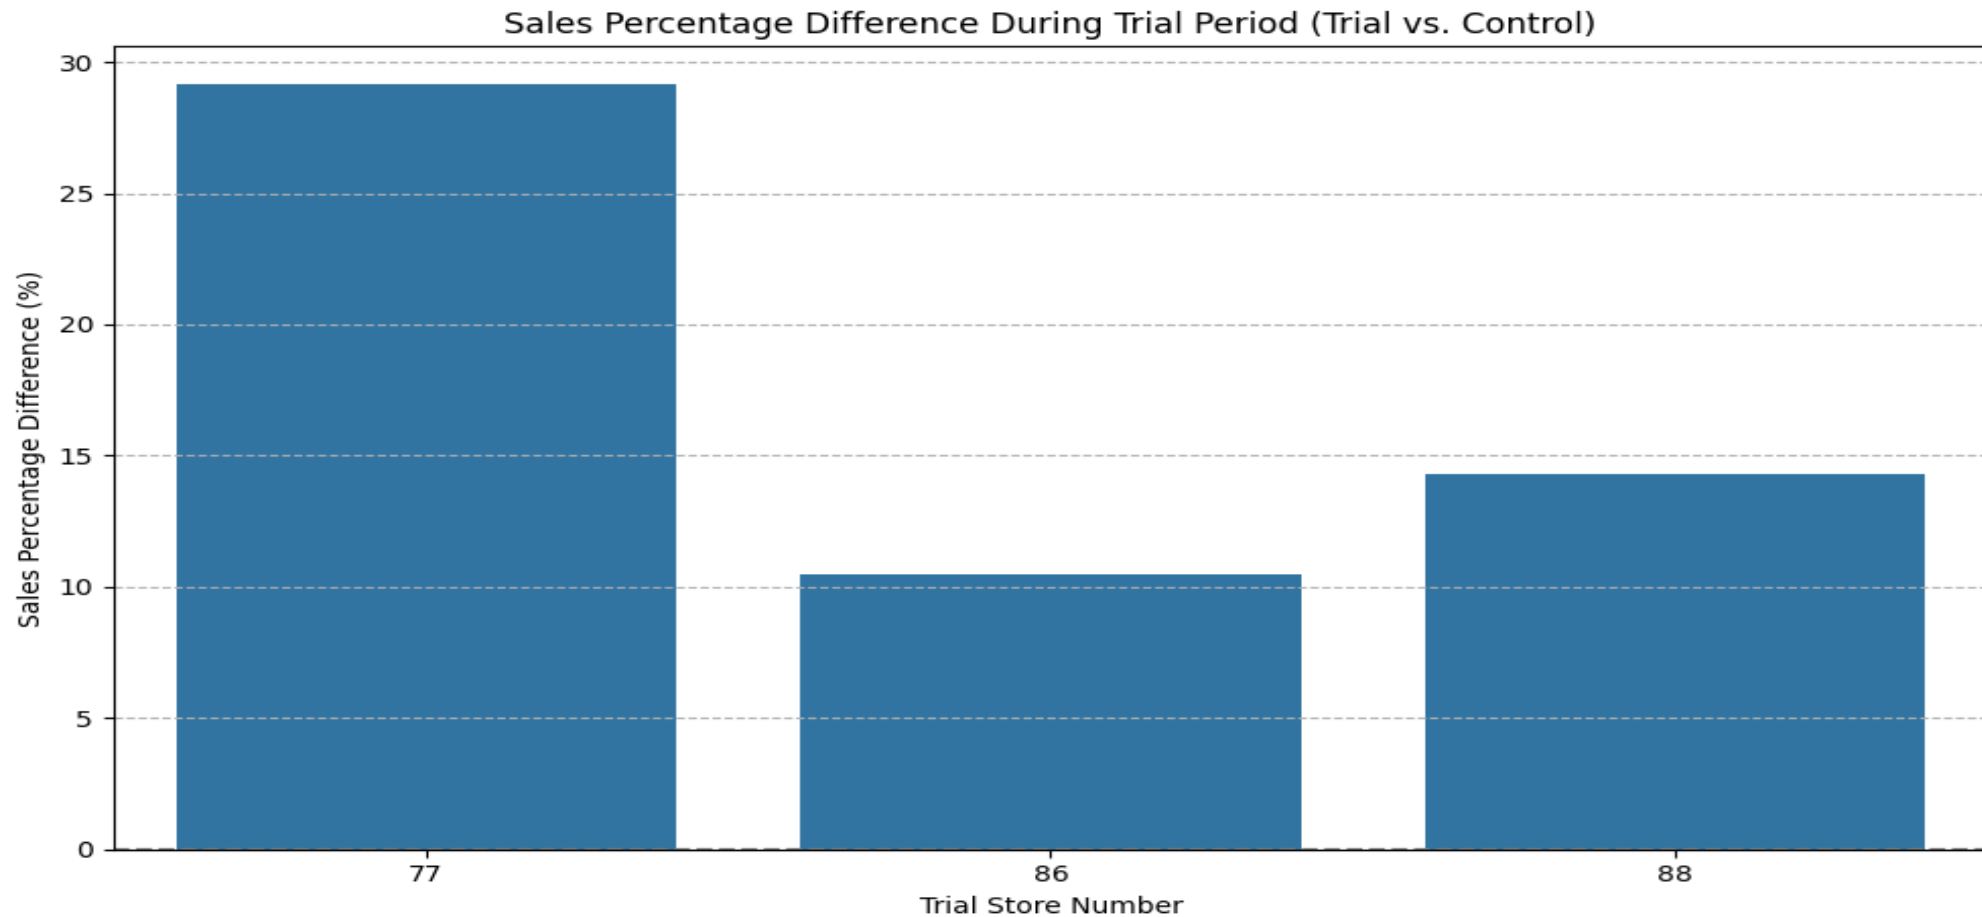

- The figure clearly shows that the New Families segment is underperforming in terms of total sales.” Sales are concentrated in larger pack sizes (175g+), indicating a mismatch with this segment’s likely preference for smaller, child-friendly packs. In addition, lower customer reach and limited targeted positioning are contributing to weaker performance.
- The low sales reflect a strategic gap, presenting an opportunity to improve penetration through better pack-size alignment and focused marketing initiatives.

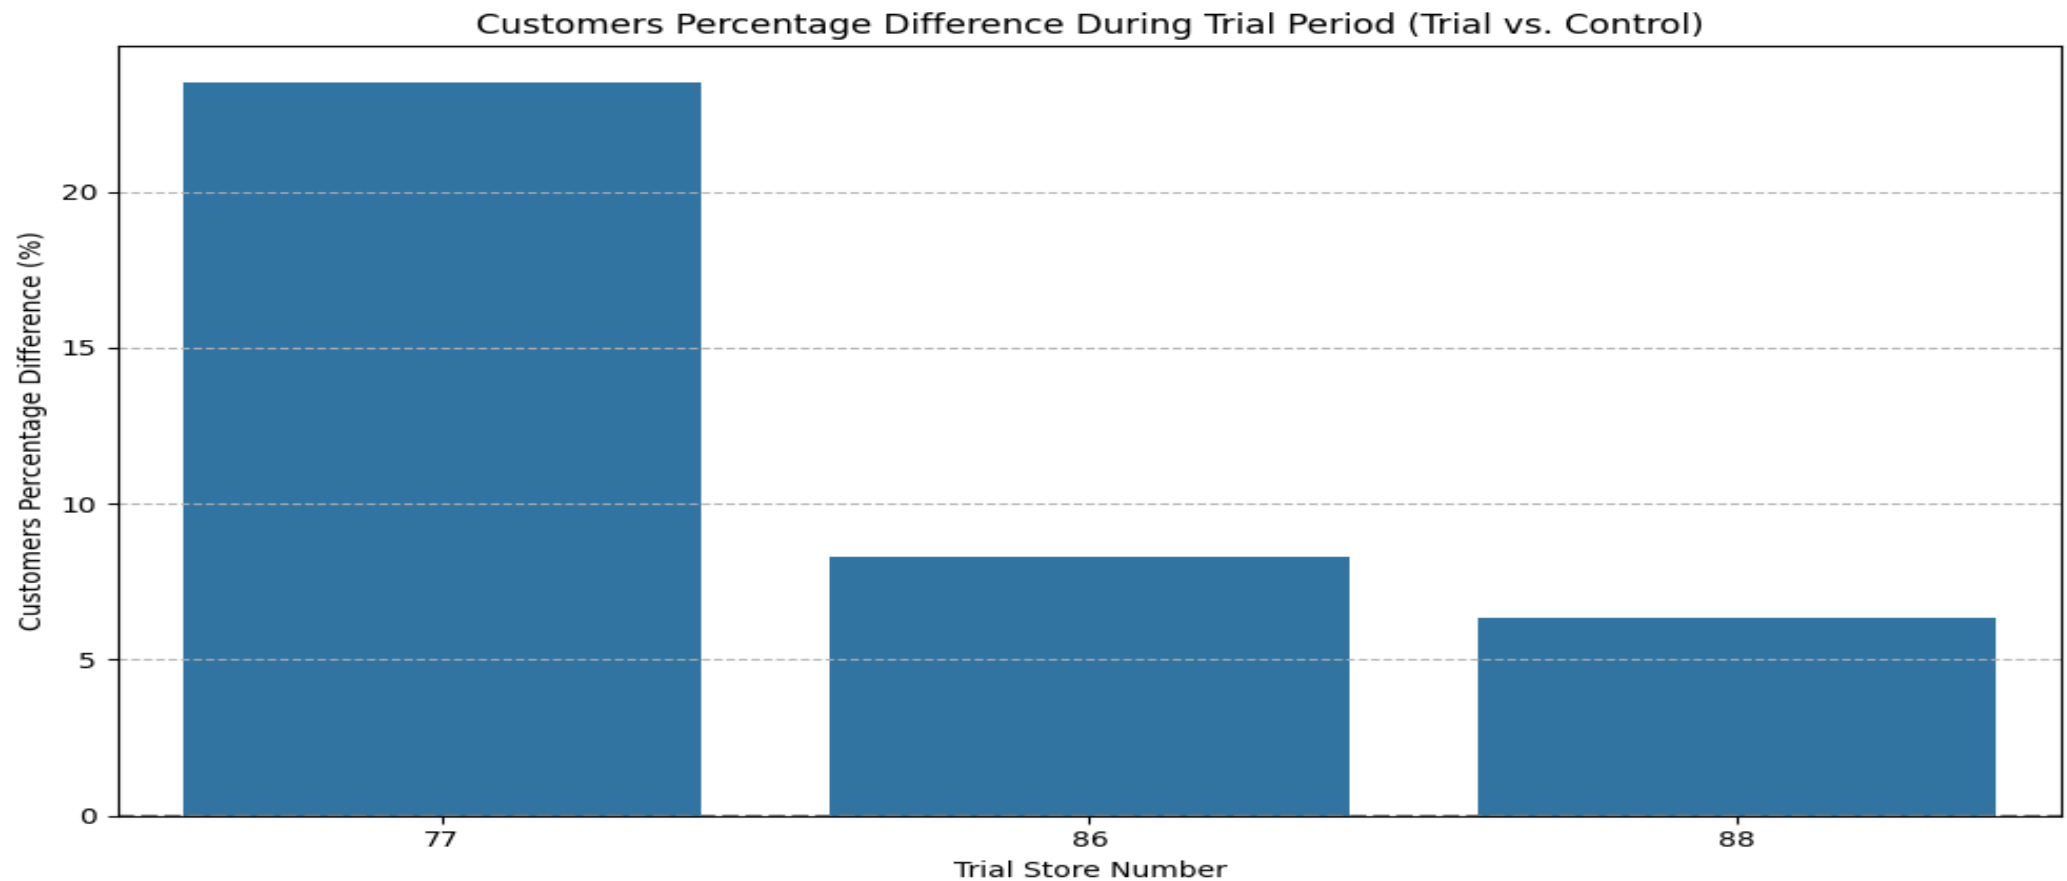

02

Trial store performance

- Our analysis shows that trial store 77's sales in February, March, and April consistently exceeded 95% of its corresponding control store. Similarly, trial store 86 outperformed its control sales across all three months.
- Additionally, trial store 88 demonstrated a significant sales increase. These results highlight strong and sustained sales uplift in multiple trial stores during the evaluation period.

- Monthly transactions per customer were compared for each trial–control store pair over the entire analysis period using line plots. The trial period is clearly shaded to emphasize changes during the trial, and all plots include descriptive titles, axis labels, and legends.
- This visualization enables a clear assessment of changes in customer purchasing behavior attributable to the trial.
